## Temperature How-To

## Temperature Tips

### Need to cool down?

- If you are in a room that is too hot, you can adjust the temperature by using the thermostat. The thermostat is located in the center of the room, and you can adjust the temperature by turning the dial. The thermostat is set to 75 degrees Fahrenheit by default.
- If you are in a room that is too hot, you can also open the windows to let in fresh air. This will help to cool down the room.
- If you are in a room that is too hot, you can also use a fan to circulate the air. This will help to cool down the room.
- If you are in a room that is too hot, you can also use a portable air conditioner. This will help to cool down the room.
- If you are in a room that is too hot, you can also use a dehumidifier. This will help to reduce the humidity in the room, which will help to cool down the room.
- If you are in a room that is too hot, you can also use a space heater. This will help to warm up the room, which will help to cool down the room.
